

The Eaglecrest Sci-Tech Program is a college preparatory program for students who will pursue degrees in science, technology, engineering and mathematics (STEM) and has graduated 275 students to date. The Sci-Tech program was founded in 1996 with a vision of preparing our students for success in what has become the STEM area. The program requires students to complete an above average course load which allows the student to specialize in an area of academic interest. In order for a student to complete the overall program requirements, he or she must also complete an advanced level project that reflects original thought, demonstrates the application of core concepts, demonstrates an understanding of the relationship between core academic STEM areas, and must meet the elevated expectations of faculty advisors and industry professionals. Upon completion of the program, Sci-Tech students are prepared to succeed in a variety of post secondary educational environments.

The Sci-Tech STEM program requires students to complete a challenging yet focused academic program which requires the completion of the following credits with a minimum 3.0 grade point average:

- 4 units of Language Arts
- 3 units of Social Studies
- 4 units of Math (minimum 3.0 GPA in Math courses)
- 4 units of Science (minimum 3.0 GPA in Science courses)
- 3 units of World Language
- 1.5 units of Physical Education
- .5 units of Health
- 4.5 units of Sci-Tech Electives

These requirements allow each student to specialize in an academic area that is of specific interest to them, based on their future education and career plans.
